

# Sitesafe and You

Having spent many years involved in Civil and Grounds Maintenance Contracting we, like you, have learned a lot of lessons the hard way.

Site Theft and senseless Vandalism are the two things that annoy us the most.

The direct result is always Cost:

- Cost to replace Stolen Equipment
- Cost to Repair Damaged Machines
- Cost in Downtime

At Sitesafe we've gone a long way towards eliminating these problems for ourselves and our customers. We'll be pleased to help you do the same.

'Link' Units will provide a high degree of security, are relocatable, will withstand the rigours of everyday use and only need a minimum of maintenance.

To discuss your requirements please contact:

# SITESAFE

# Link Units

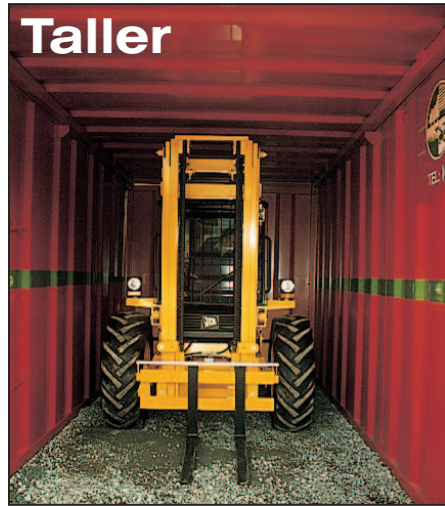

**MADE TO MATCH YOUR NEEDS**  
**TALLER | WIDER | STRONGER**  
**A SIGNIFICANT DIFFERENCE**  
**SECURE STORAGE & ACCOMMODATION**

**SITESAFE LINK UNITS**

# Why Link Units?

**Taller**

Larger pieces of movable plant have always been difficult to secure overnight, just due to physical size. Old shipping containers just aren't big enough or strong enough. A Link Unit is:

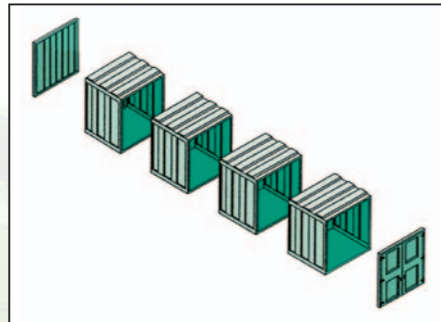

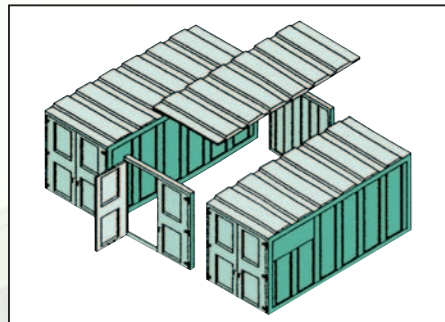

**Wider**

**Stronger**

**But:**

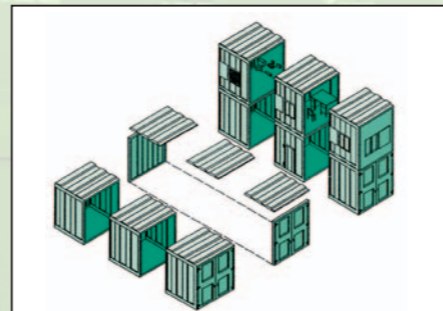

two single units can be linked together by adding a front, a back and a roof section, so providing a third. That means 33% more space at a minimal cost and a corresponding increase in the stacking area.

**Or:**

for ease of movement and total flexibility units of any length can be constructed by using 'Link' modules and joined using 'Link' sections.

## Alternatively a Modular 'Linked' Stacker Unit

**GARAGE | WORKSHOP | STORES | CANTEN**

# Sitesafe 'Link' Options:
